

Nominated for Practice Efficiency  
Award at Legalex 2019

# Harness institutional knowledge intelligently and intuitively

## STACKS

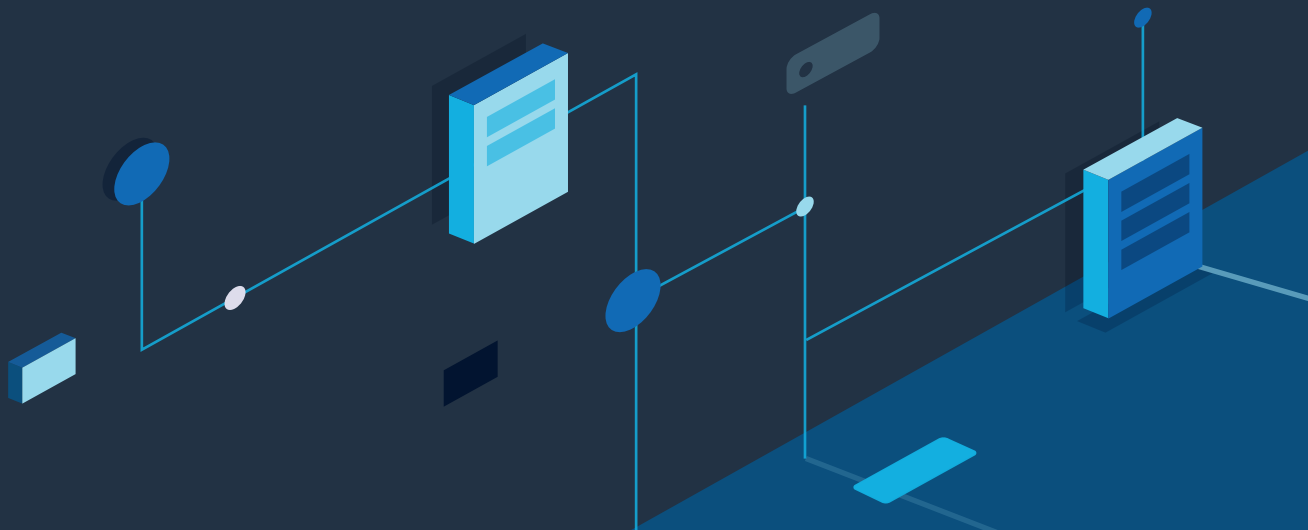

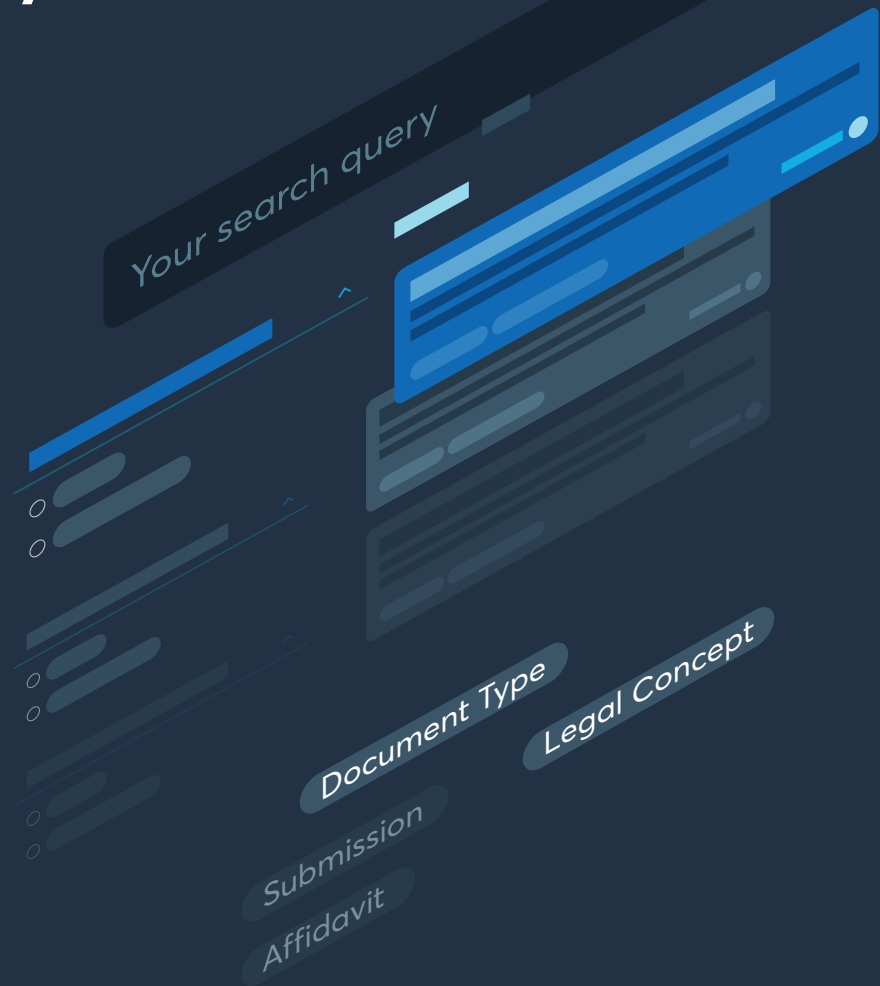

—Your firm's intelligent knowledge library

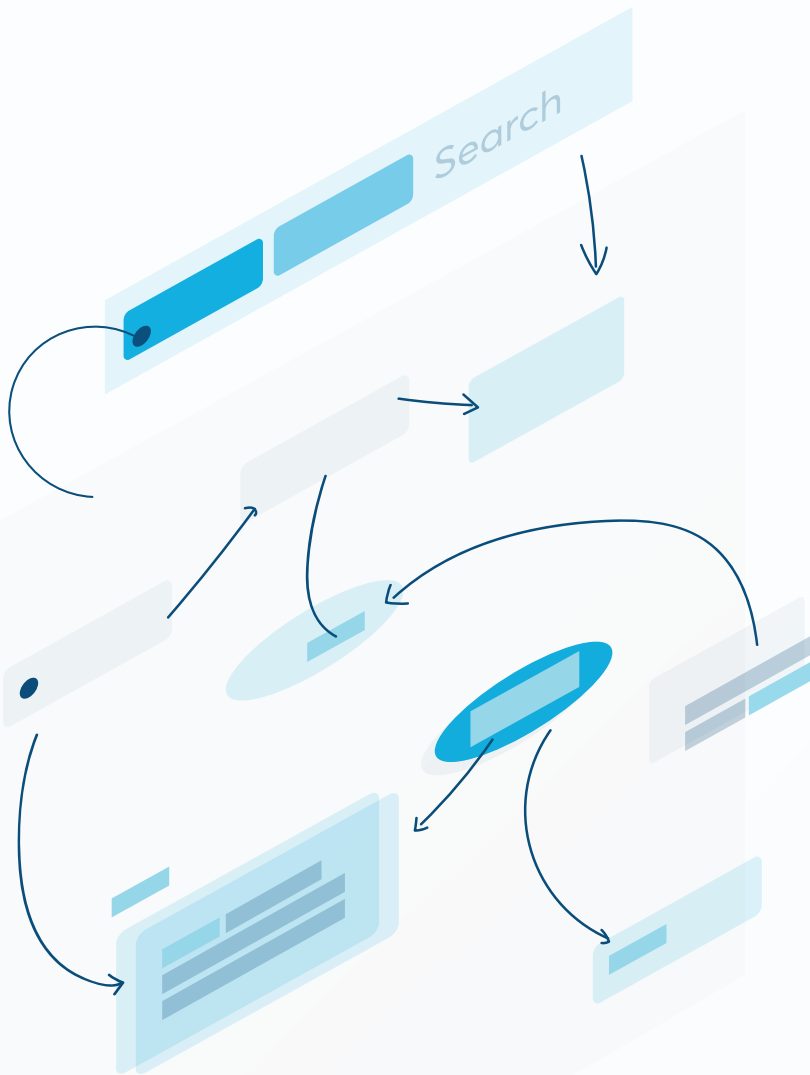

### Tackle inconsistent organisation with **predictive classification**

Accelerate knowledge organisation of your firm's documents by allowing our A.I. to assist in categorising them according to useful legal dimensions. Retain the flexibility to integrate your firm's taxonomy.

### Tackle dormant data by leveraging our **legal Knowledge Graph**

Our Knowledge Graph leverages our proprietary ontology and maps out the complex relationships between different legal entities and your metadata. By understanding the context, our graph-powered search allows law firms to focus on unlocking insights from their knowledge assets.

## SOURCE

—Contextual search engine for external resources

### Tackle ineffective retrieval with our **contextual search**

Our search engine understands the contextual meaning of legal terms and the user's intent. For example, searching for "TUPE" will also surface results related to "business transfer". The search experience is designed around a lawyer's search habits, to intuitively guide you to the data you need.

Augment and auto-complete your search query with:

- Semantic relatedness search
- Relevant legal questions automatically extracted by our A.I., which will point you to the case(s) which are on-point.
